

Benefits of Registration Software

1. Digital Check-In Kiosks

Replacing your clipboard with a tablet at each kiosk can facilitate rapid check-ins: with just a few taps, registrants are checked in and ready to receive their badges. There's no cumbersome paperwork process, no long lines, and, most importantly, no excessive and unnecessary paper use.

2. On-Demand Badge Printing

To maintain a low rate of paper and plastic waste, invest in conference check-in software that uses on-demand badge printing. That way, you'll only print badges for those who attend your event instead of all your registrants.

3. QR Codes for Digitized Materials

You can include QR codes on your guests' badges, banners, and signs throughout your event. The QR code links to a purpose-built landing page, where guests can easily access every map, menu, and pamphlet you've prepared.

4. Electronic Lead Capture

Providing a QR code at each booth or session allows guests to scan it and quickly enter their details on their mobile devices. This removes the need to enter every lead's information into your CRM system manually. Instead, the QR code handles it all for you.

5. Sophisticated Scanning

QR codes aren't the only way you can use scanning to create a more environmentally conscious event. You can also use RFID event solutions to monitor attendance at every session of your event. RFID scanning helps accurately track food and beverage needs for meals and socials.
